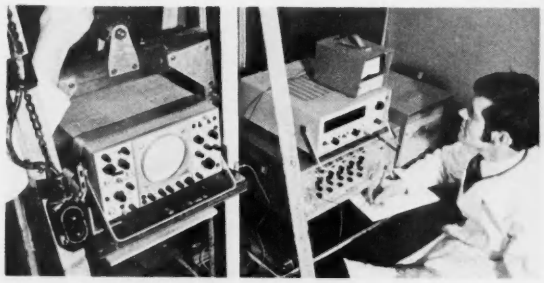
INTERNATIONAL DISTRIBUTION

THE COMPLETE SERVICE

Designed for companies operating in Overseas markets

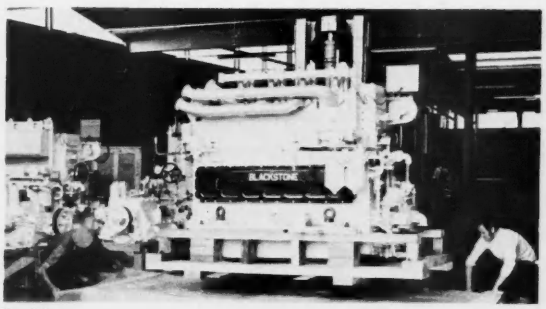


Simulation of Transit Conditions.

Products to be packed are set up on EPS (Research & Development) laboratory test equipment to evaluate transit hazards and packing materials to be employed.

Pack Design.

Packs are designed by qualified engineers to ensure maximum product protection against physical and environmental damage during normal transit conditions.



Packing.

Constant research ensures complete protection.
A plastic environmental protective membrane, part of an all enveloping skin, is applied to a government shipment of marine diesel engines.

Transport.

The company employs freighting experts to ensure that the most viable methods of transportation are used.

Materials Selection.

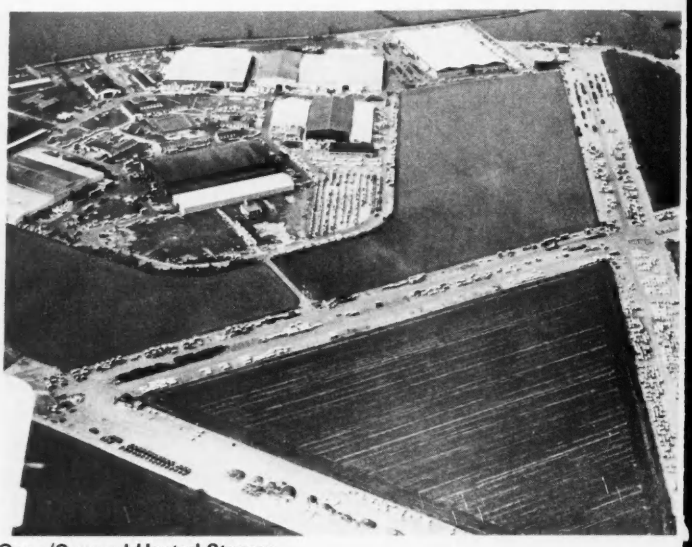
A constant check is made on packing materials to ensure maximum product protection and cost effectiveness at all times.

Export Documentation

Is an every day business for our experts.

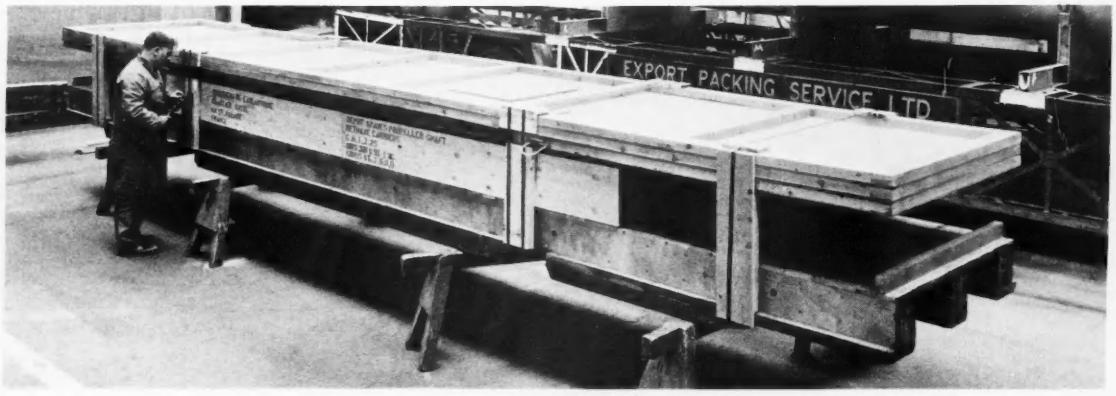
Environmental Protection.

Specially designed Dricon containers provide protection against physical damage and climatic conditions during transit and long term storage.



Open/Covered Heated Storage.

Twenty-six acres of hardstanding plus 600,000 sq. ft. of heated covered storage space.



Shook-form Cases.

Factory made shook-form cases (in kits) can be supplied for instant packing on site.

Manufacturers of equipment from micro circuits to power stations, daily use the Special Packing Service as it provides them with opportunities to improve the use of their own resources:–

1. **SPACE – to make more profit.**

   The Service provides low-cost heated modern buildings for packing and storage, freeing the manufacturer's premises for more profitable production.

2. **CAPITAL – to earn higher returns on assets.**

   The Service releases expensive capital tied up in stocks, packaging materials and goods awaiting packing. It also provides a seven day turnround, ensuring that goods are delivered on time, thereby enabling manufacturers to be paid more quickly and improve their cash flow. The 'on-site' service allows exports to be shipped within 24 hours of production.

3. **LABOUR – freed to increase output and sales.**

   EPS Special Packing has a highly trained labour force, which frees manufacturer's own staff for other profit earning production. The flexibility of the labour force enables the Service to cope with sudden or unexpected export demands from overseas customers, without loss of quality.

SPD protects your exports because its cost effective Service is supported by:–

Research & Development – Pack testing and the verification that materials are to the correct specification to maintain a high level of mechanical and environmental protection.

Pack Development – Which ensures continued cost effectiveness.

Low Cost Storage and Packing

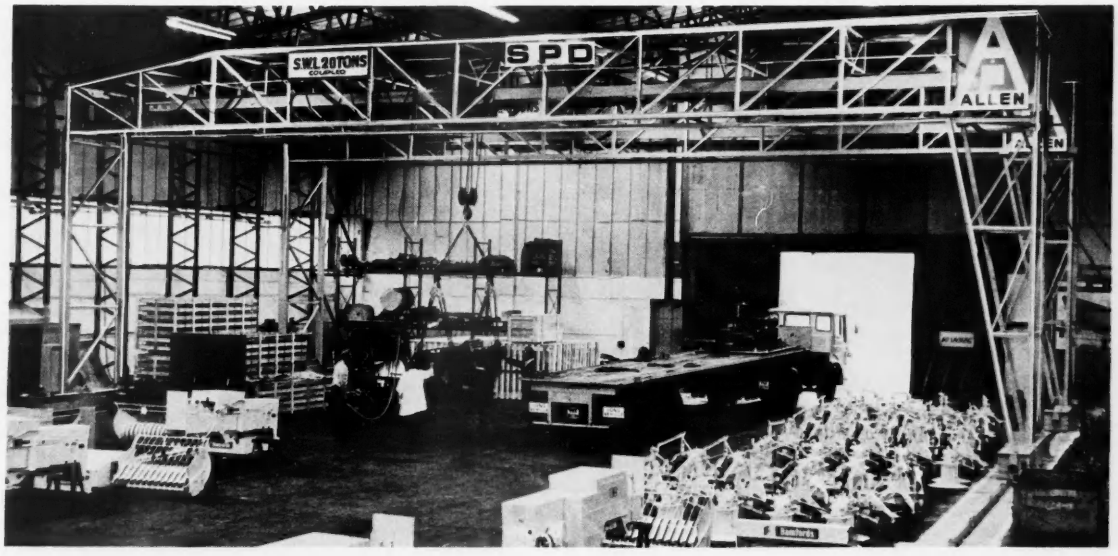
HEAVY EQUIPMENT

Production delays or failures by sub-contractors to deliver vital parts on time cause shop-floor blockages and unnecessary hold-ups.

Net result – late delivery, unproductive manpower, dissatisfied customer and heavy cost overheads.

Release this burden by using the specialist – EPS Special Packing can solve all your problems.

We can receive and store your equipment whenever your heavy lift shop becomes overcrowded because of:–



* **design or production delays.**
* **failure of sub-contractors to deliver the goods.**
* **the need to marshall machines for delivery in one consignment.**
* **basic storage space problems.**

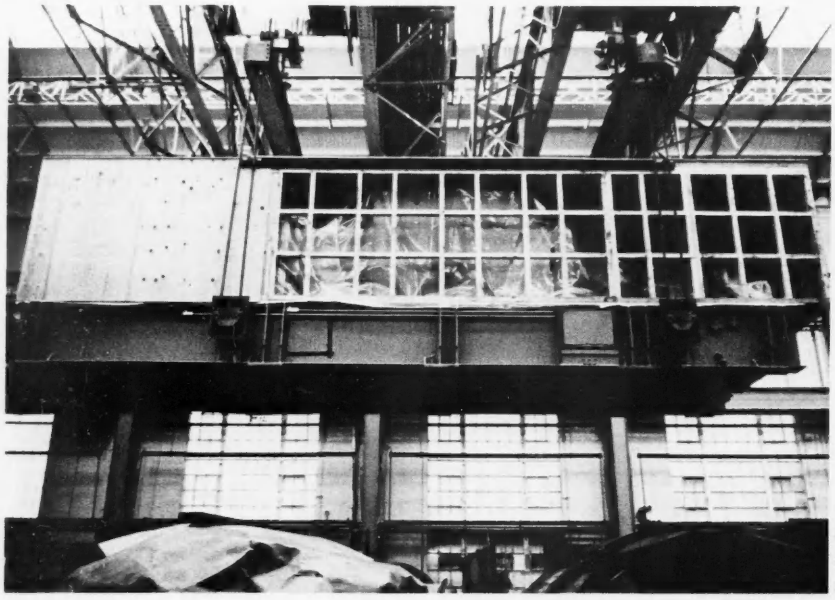
We can also undertake your Documentation, Customs and Shipping requirements. EPS Special Packing means high quality mechanical and environmental protection to written quality specifications and at lower total costs.

TRADE AND INDUSTRY 14th DECEMBER 1972.

Preservation and Packing on Customers Premises

ON SITE PACKING

EPS On-Site Packing Teams operate day and night, seven days a week, to suit customers requirements.
Packing on-site can save money by cutting out customer labour and transport involvement.
The On-Site service, ranging from small product packing and container stuffing to the protection and transportation of a 120 ton generator, is available throughout the country.



A 120 Alternator being environmentally packed at Brush Electric's Factory at Loughborough.

The EPS On-Site Service will:—

- **ensure on-time delivery.**
- **safeguard quality.**
- **release production space quickly.**
- **increase production capacity.**
- **reduce capital and labour commitments.**
- **help improve profit margins.**
